Tagtile Set Up and Operation flow with respect to the Web Portal:

Important Keywords to understand this document:

1. Tagtile admin - Super admin user / Product admin user having all the management rights to the web portal, stores, users, products, gateways and devices.
2. Store admin - Admin user having management rights for users, products, gateways and devices of the particular store.
3. Gateway - Communication bridge between server and devices.
4. Devices - Tags to be attached with products.
5. Labels - Product detail image to be displayed over devices.

Configuration - To be done at Tagtile admin office or Onsite:

1. Tagtile admin (Superadmin) will create the store. Store creation will attach the store with area, city, state and country.
2. Tagtile admin will then create store admin user. This will attach the store admin with the store.
3. Tagtile admin / Store admin will create products. Tagtile admin will be able to create products under any store by selecting the store while creating the products. Store admins will be able to create products under their stores only.

Installation - To be done onsite:

1. Tagtile admin / Store admin will create Gateways. Tagtile admin will be able to create Gateway under any store by selecting the store while creating the Gateways. Store admins will be able to create Gateways under their stores only.
2. Tagtile admin / Store admin will switch ON the Gateways and relevant Devices.
3. Tagtile admin / Store admin will autoscan the devices by selecting the gateways and running autoscan from the web portal. This will list down all the available devices in proximity of the gateway. This will also automatically attach the device to gateway and store. Attaching the device with store will also automatically attach it with appropriate area, city, state and country.
4. Once the devices are listed, they will get their serial numbers in the web portal. The server will publish these serial numbers to the devices via gateways after successful auto listing of the devices. The devices will start showing them on LCD. This is how the devices will start showing their serial numbers on LCD.
5. All the devices listed above will have their product assignment mentioned as 'Unassigned'. The Tagtile admin / Store admin will install device physically on the product shelf.
6. Tagtile admin / Store admin will check the serial number being displayed over the LCD of that device and will edit the device with having this serial number from the web portal. During this edit, they will assign the appropriate product to the device from the product list created during configuration mentioned above. This is how the devices will get attached to the appropriate product.
7. In addition to above mentioned auto-scanning method, Tagtile admin / Store admin can also add the devices manually one by one from web portal as well. They can attach the relevant product to the devices while creating products.

Label Publishing - To be done at Tagtile admin office or Onsite:

1. Tagtile admin / Store admin will create the label image from the web portal.
2. Once the label image is created, they can publish it by selecting the appropriate store and product from web portal.
3. This will update the labels for all the devices attached with the selected product within the selected store.
